Svetište

Svetište svetog Leopolda Bogdana Mandića u Zakučcu utemeljeno je na blagdan ovoga sveca 12. svibnja 1998. godine, a svečano je otvoreno dvije godine kasnije u okviru svjetske proslave Velikog jubileja 2000. godina kršćanstva. U jedinstvenome prirodnom ambijentu podnožja litice Mosora, u kamenom obronku nalazi se iskopan dugački hodnik (špilja) koji u svojem središtu ima kapelicu posvećenu svetom Leopoldu Bogdanu Mandiću, čiji preci potječu iz ovoga poljičkog sela. Kapelicu s moćima i srebrnim reljefom sveca zaštitnika te oltar njemu u čast posvetio je 11. svibnja 2006. godine nadbiskup splitsko-makarski, mons. Marin Barišić. Ispred ulaza u špilju nalazi se prostrana zaravan za bogoslužje, kojom dominira oltarna menza te u njezinoj blizini brončani kip sv. Leopolda.

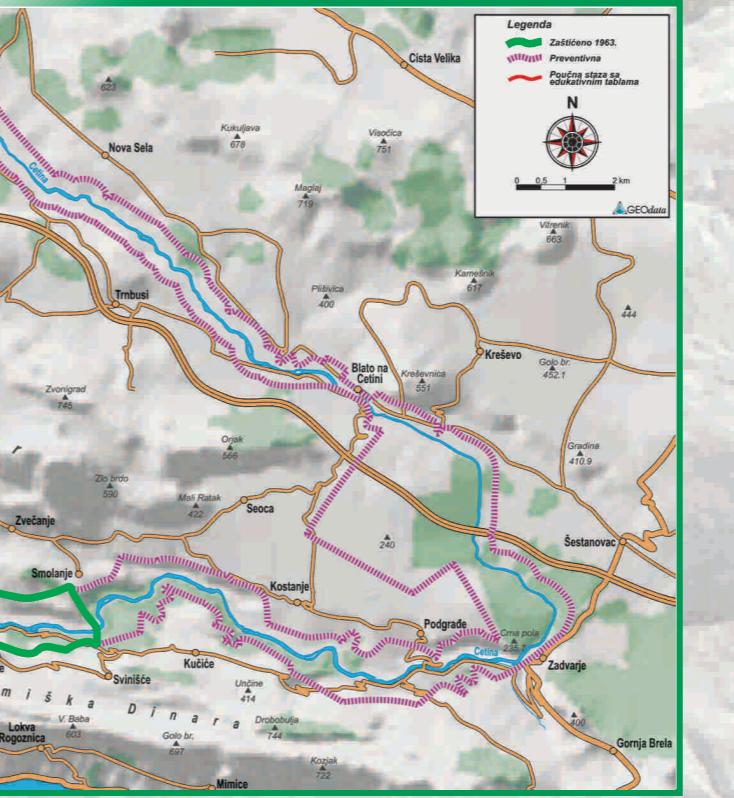

The Shrine

The shrine of Saint Leopold Bogdan Mandić in Zakučcu was founded on this saint's holiday, 12th May, 1998. It had its grand opening two years later within the world celebration of Grand Jubilee of 2000 years of Christianity. In the unique, natural surrounding of the foothills of Mosor, on the stone slope there is a long hall (cave) in the center of which there is a chapel dedicated to Saint Leopold Mandić, whose ancestors come from this village of Poljica. The chapel with relics and silver relief of the protecting saint, as well as the altar in his honor was dedicated on 11th May, 2006 by Marin Barišić, the Archbishop of Split-Makarska. In front of the cave entrance there is a spacious terrace for the liturgy dominated by the altar mess hall in the vicinity of which there is a bronze statue of St. Leopold.

Basic features:
Lenght: 2,6 km
Altitude above sea-level: 32 - 299 m asl
Tour time: around 2 hours
Rest areas: 11
Skylights: 5
Difficulty level: moderately difficult
The equipment needed: comfortable sports footwear
Tour method: walking

Zaštićeno područje

Kanjon rijeke Cetine zaštićen je 1963. godine, u dužini od oko 8 km na području od ušća Cetine kod grada Omiša pa uzvodno do Tisnih stina. Proglašenjem preventivne zaštite 2008. godine na području od Tisnih stina do brane Prančevići, područje značajnoga krajobraza "Kanjon Cetine" proteže se od ušća rijeke Cetine u Omišu pa sve do brane Prančevići. Ovim zaštićenim lokalitetom upravlja Javna ustanova za upravljanje zaštićenim prirodnim vrijednostima na području Splitsko-dalmatinske županije, a u skladu sa Zakonom o zaštiti prirode. Cjelokupni tok rijeke Cetine je područje ekološke mreže te potencijalno NATURA 2000 područje.

Kanjon rijeke Cetine geomorfološki je fenomen koji je rijeka Cetina, kao tipična rijeka u kršu, stvorila na svojem putu do mora. U svojem donjem toku duboko se usjekla u vapnenačku

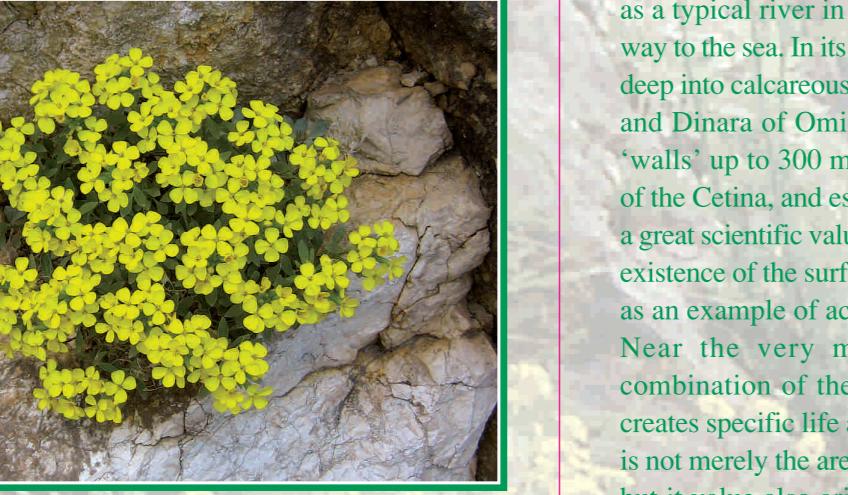

podlogu između Mosora i Omiške Dinare, tvoreći kanjonske strane visine i do 300 m. Cijeli tok Cetine, a posebice njezin kanjonski dio, ima veliku znanstvenu vrijednost kao primjer stalnoga postojanja površinskog toka u kršu te kao primjer djelovanja erozije. Blizu samog ušća rijeke Cetine, kombinacija utjecaja rijeke i mora tvori specifične životne zajednice. Kanjon Cetine nije samo područje

Protected area

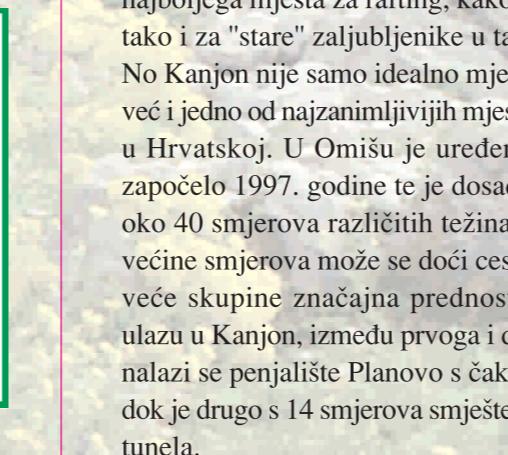

The canyon of the river Cetina was protected in 1963 in the length of 8 km. It included the area from the mouth of Cetina, nearby the city of Omiš and upstream up to Tisne Stine. By declaring the preventive protection in the year 2008 in the area of Tisne Stine up to Prančevići dam, the area of Significant Landscape "Cetina

osobitih prirodnih vrijednosti radi svojih geomorfoloških i hidroloških osobina, već mu značaj daje kako floristička tako i faunistička raznolikost. Rijeka Cetina stanište je rijetkih i ugroženih ribljih vrsta, a uz rijeku žive brojne ptice, vodozemci, gmazovi i sisavci. Bogatstvo biljnoga svijeta u kanjonu čine različite biljne zajednice, od vegetacije stijena, tršćaka, travnjaka do šumskih kompleksa. Na ovom području nalazimo i velik broj endema.

Kultura

U sklopu značajnoga krajobraza, uz prirodoslovne vrijednosti nalaze se i brojne kulturnopovijesne znamenitosti. Bogatu i iscrplju povijest omiškoga gusarstva zorno predočava tvrđava Starigrad (Fortica), zajedno s tvrđavom Peovica (Mirabela). Fortica se nalazi na samome vrhu Omiške Dinare, s koje se pruža pogled na cijeli grad Omiš, Kanjon, otoke Brač, Hvar i Šolta te srednja Poljica. Cijeli Kanjon je pod "budnim okom" junakinje iz doba borbe Poljičana s Turcima. Riječ je o spomeniku Mili Gojsalić, radu Ivana Meštrovića, koji se nalazi na litici poviše Svetišta svetog Leopolda Bogdana Mandića u blizini slapa Ilinca gdje je svoj mladi život skončala ova glasovita poljička heroina.

Culture

Special landscape, beside naturalist values also includes numerous cultural and historical sights. The rich and detailed history of the Omiš piracy is realistically presented by Starigrad (Fortica) fortress, together with fortress Peovica (Mirabela). Fortica is situated at the very peak of Dinara of Omiš, where from you can have the view of the entire city of Omiš, the canyon, islands Brač, Hvar and Šolta and of Srednja (Middle) Poljica. The entire canyon rests under the watchful eye of a heroine belonging to the era when people of Poljica fought the Turks. We are talking about the monument to Mila

Gojsalić, the work by Ivan Meštrović, placed on the cliff above the Shrine of Saint Leopold Bogdan Mandić; in the vicinity of the Ilinac fall where this famous heroine from Poljica ended her life.

Tourist offer

The river Cetina, surrounded by luxuriant vegetation, with several beautiful islands, in places completely calm, is the real place to rest your body and soul, whereas its rapids make it the ideal destination for unforgettable rafting adventure.

As a combination of adventurism, sport and fun, rafting had its greatest revival on the Cetina. The river, its amazingly beautiful canyon provide the unforgettable sensation and justify the epithet of the best rafting place, for the beginners as well as for the "old" lovers of the sport.

However, the canyon is not merely a rafting spot; it is also one of the most interesting climbing sights in Croatia. In Omiš, the organization of climbing sights started in 1997. Approximately 40 directions different in length and difficulty have been made so far. Most directions are reachable by road which is particularly advantageous for larger groups. At the very entrance to canyon, between the first and the second tunnel, there is a climbing sight Planovo with 28 directions, whereas the second one with fourteen directions is placed after the second tunnel.

The canyon also offers the possibility of recreational fishing. U Kanjonu postoji i mogućnost rekreacijskoga ribolova.

Poučna staza

Gradnja poučne staze "Sv. Leopold Mandić" započeta je 2009., dok je njezino svečano otvaranje bilo 18. svibnja 2010. godine. To je prva poučna staza otvorena za javnost na području grada Omiša. Nastala je radom i suradnjom Turističke zajednice grada Omiša, Javne ustanove za upravljanje zaštićenim prirodnim vrijednostima na području Splitsko-dalmatinske županije te Splitsko-dalmatinske županije. Poučna staza smještena je na području značajnoga krajobraza "Kanjon Cetine". Kružnoga je oblika i na njoj su predstavljena prirodna

Educational track

The construction of the educational track "St. Leopold Mandić" began in the year 2009 whereas its grand opening took place on 18th May, 2010. The first educational track was open to the public in the area of the city of Omiš. It was a result of collaboration between the city of Omiš Tourist Board, Public Institution for the Protected Natural Values Management in the County of Split and Dalmatia and the County of Split and Dalmatia. The educational track is

situated within Significant Landscape "Cetina Canyon". It is circular in shape. Natural and cultural features of this part of the canyon are represented there. Its purpose is to educate all the visitors of the Significant Landscape "Cetina Canyon" and it represents a part of the former "lifeblood" of the area, the road across the rugged areas of Mosor through which the inhabitants of Gornja (Upper) Poljica were connected, across Srednja (Middle) Poljica to Donja (Lower) Poljica. Please do not throw away garbage so that this
